Wichita State University Rowing departed from the Head of the Oklahoma Regatta on September 29, 2012 with five crews bringing home medals after a long day of racing. The race spans 4,000 meters of the Oklahoma River in Oklahoma City, OK and includes racing through eight bridges, challenging both rowers and coxswains. This was the first racing experience for the novice, or first year, rowers since the team began practicing in mid-August. To add to the experience, it began raining around noon in Oklahoma City and did not let up all day, continuing even after the team departed at almost 12:00am. Fortunately, it was a light rain that some of the rowers were said to have enjoyeht(tel-4(. Th)-4()11(s)-)12 n aftlp1(s)and did WSU qualified five boats for the exciting OGE NightSprints. The race is only 500 meters and the events begin right as the sun goes down. The river is lit up and competing crews are

to secure the gold in an exciting race having won by two seconds. Then four WSU eights, varsity and novice, competed with another crew from Texas in the petite finals, finishing first, second, and third. To end the night, fireworks light up the river as the last boats of the NightSprints leave the river and crews prepare to load trailers and head home.
