Phototherapy Rejuvenation

This 65-year-old patient had concerns that her sunspots and photoaging were giving away her true age. After undergoing BBLTM phototherapy, her hands look as young as she feels.

Refreshing "Liquid Facelift"

Worried about her drawn and tired appearance, this 60-year-old patient underwent a "liquid facelift" with Sculptra® for a profound improvement in her appearance.

Our Distinguishing Factor

When it comes to cosmetics, Dr. Jody Levine believes in offering her patients a top-notch level of comprehensive care, which starts with the physicians she works with. Teaming up with her husband, plastic surgeon Dr. Elie Levine, Dr. Levine is able to provide a host of skin-care options that might not have otherwise been available. "I choose to spend a lot of time with my patients during consultation to determine the best possible treatment for appropriately addressing their skin concerns," says Dr. Levine. "Sometimes filler after filler does not achieve the patient's actual goals, and maybe what they really need is surgery.

It is true for the vice versa as well. Often a patient who gets a facelift will also need fillers, or perhaps a laser procedure to treat the tone of their skin in conjunction with correcting the laxity. Working with my husband has made both of us better doctors, and it also distinguishes our practice and makes us unique. We are able to give the patient what he or she really needs."
